

DID YOU KNOW?

Using soft wheel casters increases chairmat performance and extends mat life.

Use soft wheel casters on wood or tile floors and with chairmats.

Here's why:

Using a hard wheel caster on these surfaces can harm the hard floor surfaces and mat. Hard wheels also "skate" instead of roll on these surfaces causing possible accidents. Muscle strain may also result due to more effort to keep your chair in place.

IT'S IMPORTANT TO CHOOSE THE RIGHT CHAIR CASTER FOR YOUR APPLICATION

Use hard wheel casters for use on carpeted floors.

Here's why:

Hard wheel casters on carpet allow the chair to glide smoothly over the carpeted surface. Soft wheel casters used on carpeting may cause muscle strain due to increased difficulty in chair movement.
